

TRAFOMIO

We make things happen

We make things happen

Our Services & Products

Trafomo is a **significant provider** and distributor of parts, products and electronic components and electromechanical materials. We offer a wide range of services to all operators on the electronic and electromechanical market, logistics, distribution, expertise, know how, technical sparring and supply chain management. We supply components and materials to a large number of industries mainly in Northern Europe based on logistics agreements.

Our clients represent a wide **spectrum of professions**, from the heavy industries of wind-mills, trains and aeroplanes to the micro worlds of TV, Ipods and computergames. Wherever a transformation of current and voltage is needed **we make things happen** by matching the best components to the required application.

Our mission is to be an **expert**, flexible and reliable partner in advising our customers during the design phase, and then to secure the right quality products on time.

”

50 years in the business give us a good confidence that
what we do, we do right

”

Your Benefits & Advantages

As our customer and partner you can trust our focus to quality defined as having a good and reliable product. Technical sales are to a great extent based on confidence and our broad range of **quality products** makes it easy for our customers to find the right solution. So quality is a vital part of our concept.

As a relatively small firm flexibility has been crucial for our success on the market. Flexibility is about being able to adjust to new conditions. **Trafomo's flexibility** finds expression in our adaptability to customer wishes and our quick reaction if something unforeseen happens.

Our expertise is determined by the high technical knowledge of our employees combined with a marked sense of responsibility. **50 years** in the market has given us a broad and profound knowledge of the potential supply channels, a knowledge that is continuously updated. Our products come from some of the **leading manufacturers in the world**. This gives you the security of getting the best components and the best solution in each and every project.

We make things happen

About US

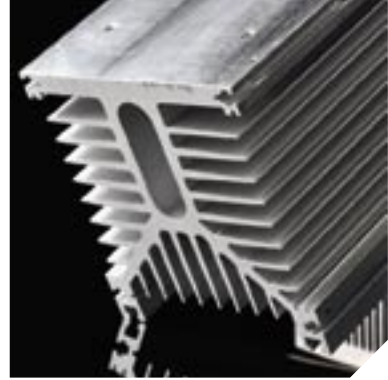

Trafomo was founded in 1959. Our business started with transformer and motor applications – hence the name: TRAF-OMO. Today these applications are still important to Trafomo, but our business extends more and more to the electronic applications where we see a growth in the market.

Trafomo is a privately owned and respected business with a long history and a strong team-spirit. To day we are 28 dedicated, dynamic and highly skilled people who will ensure the **best possible service** for our business partners.

We are strategically well situated with our main office and central stores close to Copenhagen, Denmark, and we have sales offices in western Denmark, Sweden and Finland.

We rush open minded and confident into the future and are always at the **forefront** of the ongoing development.

Your Preferred Partner

We have grown from being a small company offering a selection of electromechanical products only to also being a significant player with electronic components on a **global market**, but with emphasis on the 4 Nordic countries.

We are operating in a market niche being a strong player in all the essential product groups we represent.

Our ambition is to extend our **flexibility** and the knowledge of Traformo to show an individual, personal approach and contact with our business

partners and customers. To this end we have developed a logistic concept that can be adapted individually to all customers. Thus our long experience, profound **know-how**, but moderate size enables us to offer customized logistic solutions giving the customer the right product, the right quality at the right time and at a competitive price. Actually we are quite proud of being able to compete **successfully** against much larger companies also with regard to price.

Protecting Our Future, Today

New Cooper Bussmann® PV Fuse Links Protect Photovoltaic System Strings up to 1000Vdc

In the future, electrical demand will be met increasingly through renewable energy technologies. Cooper Bussmann, the world leader in fuse technology, has launched an innovative range of fuse links specifically for photovoltaic protection.

Traditional fuse links cannot protect against low level short-circuit conditions associated with solar panels. The Cooper Bussmann® Photovoltaic (PV) fuse links provide full range protection specifically designed for these unique conditions. The PV range is rated at 1000Vdc, up to 15A, and is available in the following 10x38 footprint versions, compatible with leading global fuse architecture:

- Cylindrical for use with a fuse holder or block/base
- Bolt fixing for use with a stud block/base
- Printed circuit board mounting

See the PV fuse link now at www.cooperbussmann.com/PVFuse.
